Set-up Instructions for H-WASH 5

Please ensure that you read these instructions and follow every step to create your H-WASH 45 hand-wash station.

Step 1

Unpack your unit and take out the 5L containers and soap. Place the unit in the location that you wish to install it on your vehicle. Ensure that the unit is easily accessible for the user and is positioned to make best use of space

Step 2

Mark on the unit where you will fix the top of the unit. Drill a pilot hole of 3mm into the backboard of the sink unit. Ensure you get two fixings spaced a minimum of 100mm apart.

Step 3

Fix the top of the unit to your vehicle, ensuring the unit is level. Tug on the unit to ensure that you have a firm fixing.

Step 4

Peel off the backing from the tape on the 90 degree fixing bracket supplied. Level the unit up vertically and stick the fixing bracket to the fixing pad on the underside of the unit, ensuring the bracket is pushed up against the wall/item you are fixing to on your vehicle

Step 5

Place the hand towels in the top of the unit, through the opening below the clean water container holder. Unscrew the tap from the clean water container and fill with water. Place the unit back into the container

Step 6

Place the waste water container in its holder, with the waste pipe inserted into the neck of the container. Place the soap bottle in the soap holder.
